

## Fendous 4th Anniversary Site — Documentation

### Overview

A reusable, single-page React + TypeScript presentation site adapting the "4 Years of Fendous" anniversary poster into a vertical scrolling web experience. Built to be reused in future years by editing prop data rather than rebuilding components.

---

### Tech Stack

| Tool                      | Purpose                                                        |
|---------------------------|----------------------------------------------------------------|
| <b>React + TypeScript</b> | Component framework, type safety                               |
| <b>Vite</b>               | Build tool and dev server                                      |
| <b>Tailwind CSS v4</b>    | Styling via utility classes, custom theme colors               |
| <b>Framer Motion</b>      | Scroll-triggered animations (fade, slide-in, zigzag entrances) |
| <b>lucide-react</b>       | Icon library used throughout (icons listed per section below)  |

### Why these choices

- **Tailwind v4** was chosen over Bootstrap or vanilla CSS because the dark, gradient-heavy aesthetic of the poster is much faster to build with utility classes than fighting a component library's defaults.
  - **Framer Motion** handles scroll-triggered reveals (whileInView) rather than complex scroll-linked effects — kept intentionally simple for maintainability.
  - **lucide-react** was used instead of custom SVGs/images for icons since it ships free, scales cleanly, and colors are controlled directly via Tailwind classes.
- 

### Color Palette

Defined in index.css under @theme:

```
css
```

```
--color-brand-pink: #E91E8C;
```

```
--color-brand-magenta: #FF2DAF;
```

```
--color-brand-purple: #7B2FBE;
```

```
--color-brand-violet: #9B5DE5;
```

```
--color-brand-dark: #0A0618;
```

```
--color-brand-card: #110C2A;
```

Used as Tailwind classes: bg-brand-pink, text-brand-violet, border-brand-purple, etc.

The page background uses a subtle diagonal gradient (set on html in index.css) rather than a flat color, so all sections share one continuous background rather than visible seams between blocks.

---

## Section-by-Section Breakdown

### 1. Hero Section (HeroSection.tsx)

- Logo pinned top-left (absolute positioning)
- Large "4" styled with a pink → violet gradient, positioned beside the "YEARS OF FENDOUS" text (side-by-side composition, diverging from the poster's duplicate "4" layout)
- Tagline, the „Three Is“ row (Innovation · Integration · Impact), and date range badge
- **Props:** years, companyName, tagline, subtitle, dateRange, Threels[]

### 2. Our Journey (JourneySection.tsx)

- Horizontal timeline with 4 hoverable nodes (styled dots, no icons)
- Hovering a node reveals a card above the timeline with that milestone's details
- Only one card visible at a time
- Node 4 ("Integrated Business Model") includes three overlapping outlined circles (Products / Solutions / Services) styled like overlapping rings, each with a lucide icon (Package, Network, Headphones)
- **Animation:** Whole block eases in from nowhere
- **Props:** heading, subheading, nodes[] (each node optionally has items[] or circles[])

### 3. Execution Section (ExecutionSection.tsx)

- 5-card row: DTU Collaboration, Built Partnerships, Onboarded 3 Customers, Offered Horizontal Solutions, Served 50+ Talents
- Icons: GraduationCap, Handshake, Users (pink), Globe, Users (violet — reused icon, different color to differentiate from the first Users use)
- **Animation:** cards slide from the left side of the screen
- **Props:** heading, cards[]

### 4. Our Pillars (PillarsSection.tsx)

- 2×2 grid layout (chosen over a vertical list or horizontal cards for bigger icon/text presence)
- Icons: CodeXml (IT), BrainCircuit (AI), Lock (Security), Sprout (ESG)
- Hover effect: colored glow shadow matching each card's icon color (pink or violet)
- **Animation:** cards slide in from alternating left/right with staggered delay

- **Props:** heading, subheading, pillars[] (each with a glowColor Tailwind class)

## 5. Product Showcase (ProductShowcaseSection.tsx)

- "Fendous.Live" branding with feature list (QR Check-in, Mobile & Stripe Payments, Built for Experiences) in a left column
- Product image (laptop/phone mockup) on the right
- Icons: QrCode, Smartphone (with a small Stripe badge overlapping it), CalendarHeart
- Section wrapped in its own card background/border so the image doesn't blend into the page's dark gradient
- **Animation:** shimmer/glimmer sweep effect across the image, triggered via onViewPortEnter / onViewPortLeave toggling a CSS class
- **Props:** eyebrow, productName, tagline, subtagline, features[], image

## 6. 2026 Focus (FocusSection.tsx)

- 4-column grid: header card + 3 goal cards (Human Oriented, Finance, Healthcare)
- Each goal card has a stock photo, icon, title, and description
- Icons: UserPlus, HandCoins, SquareActivity
- **Animation:** zigzag vertical entrance — card 1 slides up from below, card 2 slides down from above, card 3 slides up from below again, with ease: "easeOut" for smoothness
- **Props:** heading, subheading, description, goals[]

## 7. Photo Carousel (PhotoCarouselSection.tsx)

- Continuous auto-scrolling marquee of team photos (not present in the original poster — an added feature)
- Images array duplicated internally so the loop is seamless
- **Lightbox feature:** clicking a photo pauses the marquee and opens that image full-size in a dimmed overlay; clicking the backdrop closes it
- **Props:** heading, subheading, images[] — designed so adding/removing photos only requires editing the array in App.tsx

## 8. Thank You / Closing (ThankYouSection.tsx)

- Combines the poster's "A Big Thank You" message and closing quote into one section
- Logo + "The best is yet to come" signature line
- Footer bar: Innovating Today / Integrating Tomorrow / Impacting Forever + website link + social icons
- Icons: Lightbulb, Blocks (swapped from an earlier RefreshCw choice for a clearer "integration" visual), Target, Linkedin, Globe, Youtube
- **Props:** thankYouHeading, thankYouMessage, quote, closingLine, logo, tagline, footerItems[], websiteUrl, socialLinks[]

---

### Known Setup Notes (for future reference)

- Project was rebuilt from scratch on a clean Vite + React + TS template after inheriting a separate repo caused dependency conflicts (Vite 8 vs. @vitejs/plugin-react peer dependency mismatch). Lesson: starting fresh was faster than debugging inherited config.
- Tailwind v4 uses @import "tailwindcss" and @theme {} in CSS directly — no tailwind.config.ts needed, unlike v3.
- VS Code may show a false-positive "Unknown at rule @theme" warning; this is a linter limitation, not an actual error.

---

### Reusability for Future Years

To reuse this site next year:

1. Update prop values in App.tsx (year number, date range, descriptions, images)
2. Swap images in src/assets/
3. Add/remove carousel photos by editing the images[] array passed to PhotoCarouselSection
4. No component code should need to change unless the structure/section count changes
